Cross-Avatar Interactions with Avatar Dynamics

> VRChat #AvatarDynamics enables Avatar-to-Avatar Interactions.
>
> Have you tried the spray can in the Avatar Dynamics Hub world?
>
> This is a Contact Receiver. It reacts to a Contact Sender from @Yash884's avatar lighter!

Contacts allow you to have cross-avatar interactions such as the one above.

> The lighter has a VRC Contact Sender tagged with "Fire".
> The spray has a VRC Contact Receiver tagged with "Fire".
>
> When the lighter comes in contact with the spray, the spray bursts into flames!
> The spray enables its own VRC Contact Sender. It will light up other Receivers!
>

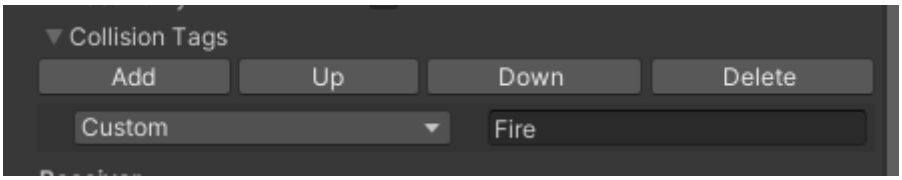
The tweet above explains it perfectly, by creating a custom tag as such, you can make a contact reciever that allows contact senders with the same exact tag to send signals to it.

> Both tags must have the exact capitalization!



So if you were to create a Contact Sender with a the tag **"Fire"** you could interact with the avatar's spray can in the tweet seen above and set it ablaze! You can apply this idea to nearly every avatar to create special cross-interactions with avatars!
