

# Cross-Avatar Interactions with Avatar Dynamics

VRChat [#AvatarDynamics](#) enables Avatar-to-Avatar Interactions.

Have you tried the spray can in the Avatar Dynamics Hub world?

This is a Contact Receiver. It reacts to a Contact Sender from [@Yash884](#)'s avatar lighter!

Contacts allow you to have cross-avatar interactions such as the one above.

The lighter has a VRC Contact Sender tagged with "Fire".  
The spray has a VRC Contact Receiver tagged with "Fire".

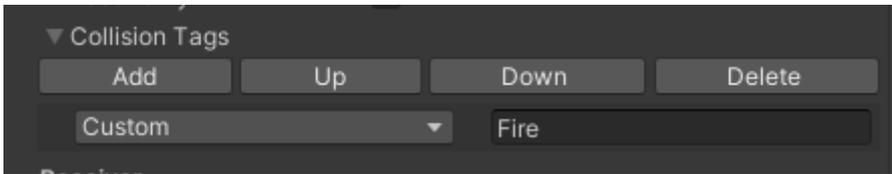

When the lighter comes in contact with the spray, the spray bursts into flames!  
The spray enables its own VRC Contact Sender. It will light up other Receivers!

The tweet above explains it perfectly, by creating a custom tag as such, you can make a contact receiver that allows contact senders with the same exact tag to send signals to it.

**Both tags must have the exact capitalization!**

So if you were to create a Contact Sender with a the tag "**Fire**" you could interact with the avatar's spray can in the tweet seen above and set it ablaze! You can apply this idea to nearly every avatar to create special cross-interactions with avatars!
