Reduce Your Max Particles!!!

I'll be fully honest I am very inexperienced with particles, but this is one thing I know that a lot of people apparently don't.

Reduce the Max Particles in the main module to just what you're actually using, by default, it's set to 1,000. This will cause VRChat to count that Particle System as if it was actually using all 1,000 particles, while it probably won't actually affect performance, due to how performance ranking works it'll mark your avatar as medium or lower.

Particle Systems	0	4	8	16
Total Particles Active	0	300	1000	2500

(The performance rankings from Excellent to Poor with the particle thresholds.)
