

# Undo History

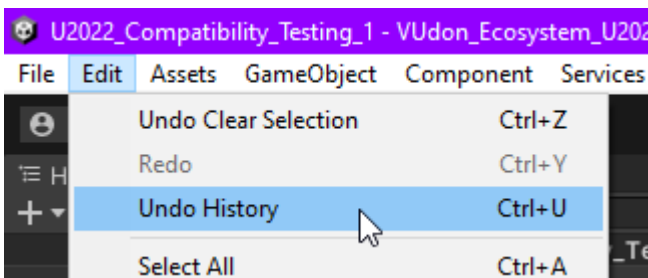

In 2022.3 we now have a dedicated Undo history window for quickly reverting changes without having to spam **CTRL + Z** repeatedly.

You can open the **Undo History** window by navigating to the **Top Right Corner** of your Unity Editor and pressing the little clock icon with an arrow around it:

You may alternatively open it from your toolbar under **Edit > Undo History**:

Or just press the keybind for it: **CTRL + U**.
